PROFESSIONAL SUMMARY

Impact-driven Data Scientist and AI/ML Engineer who turns complex, multi-source data into measurable business outcomes. Experienced deploying production ML systems, automating manual workflows, and delivering decision-ready insights through Python, SQL, Power BI, and Tableau for stakeholders in fast-paced environments.

PROFESSIONAL EXPERIENCE

AI/ML Engineer and Data Analyst - WeTechForU LLC May 2026 – Present

- Automated enterprise asset classification end-to-end by designing and deploying two production machine learning systems (GreenAssetIQ Device Recognition & Multi-Device Detection) using Computer Vision, OCR, and barcode recognition.
- Improved inventory automation accuracy and reduced manual classification by building core ML infrastructure - OCR fallback architecture, barcode pipelines, confidence-scoring and model-evaluation logic, and image-quality validation - with Python, OpenCV, and ZXing.
- Delivered reliable production AI systems by leading a cross-functional team of 5 engineers and applying MLOps practices for model deployment, monitoring, and optimization across Python, SQL, and TypeScript/Node.js.
- Strengthened stakeholder alignment and delivery velocity by driving Agile development through daily team syncs and weekly client meetings in enterprise asset-recovery environments.

Data Science and Technology Intern - WeTechForU LLC Jan 2026 – May 2026

- Enabled data-driven inventory and KPI reporting (DriveCasa) by automating pipelines and standardizing preprocessing, ingestion, and quality validation across CRM/dealership sources; designed REST APIs for downstream analytics.
- Empowered stakeholders to monitor performance, lead conversion, and KPIs (YouDrive) by building SQL-driven Power BI dashboards while supporting API integrations and database optimization.
- Improved analytics readiness by engineering pipelines that processed daily and near real-time data from SQL databases, REST APIs, CSV/Excel files, and CRM systems with built-in preprocessing and validation.

Fraud Prevention Specialist - TTEC (Partnered with Airbnb) Mar 2024 – Dec 2024

- Protected platform integrity by investigating 50+ fraud cases weekly at 98% resolution accuracy, detecting identity fraud, login fraud, and behavioral patterns using internal fraud-detection and risk-management tools.
- Supported compliance and cross-team risk decisions by collaborating with Trust & Safety, Risk Management, and Customer Experience teams and maintaining detailed investigation records for case tracking.

DATA SCIENCE PROJECTS

AutoGuard ML - Personalized Vehicle Recommendation System Jan 2026 – May 2026

- Delivered personalized recommendations across 49,846+ vehicles by developing a recommendation engine using multi-criteria decision-making (MCDM) and content-based filtering, integrating 4 government APIs (FuelEconomy.gov, NHTSA vPIC, MarketCheck, IIHS).
- Improved model accuracy to 99.4% across 21,188 records by engineering 25 predictive features from 84 raw attributes via SelectKBest and training classification models (Logistic Regression, Random Forest).
- Enabled informed buyer decisions by implementing prescriptive analytics delivering total-cost-of-ownership insights tailored to 4 distinct buyer personas.

Airbnb Market Analysis & Price Prediction Jan 2026 – Mar 2026

- Guided market-selection investment decisions by analyzing Airbnb performance across 5 countries and identifying Denmark as the premium market (\$168,358 avg annual revenue).
- Optimized price prediction for 117,800 listings by engineering 114 features from 83 attributes and evaluating 5 regression models, achieving best performance with Random Forest (0.9643 R², 41.45 RMSE).

EDUCATION

M.S. Data Science and Analytics - SUNY Buffalo State University, USA May 2026 | GPA: 3.76

B.S. Computer Applications - GLS University, India Jul 2023 | GPA: 3.78

TECHNICAL SKILLS

Data Science & ML: Statistical Analysis, Predictive Modeling & Analytics, Data Mining, Feature Engineering, Model Training & Evaluation, ETL, Data Pipelines, Data Preprocessing, Data Quality & Validation, Machine Learning, Regression, Classification, Random Forest, Logistic Regression, Computer Vision, OCR, OpenCV, Generative AI (LLMs), Model Deployment, MLOps

Tools & Platforms: Python, SQL (Advanced), TypeScript, Node.js, MySQL, REST APIs, Database Design & Optimization, Git, Power BI, Tableau, Data Visualization, Stakeholder Communication, Azure, AWS, Cloud Computing, SPSS, Agile Development
